## Swine Electrolyte

### Rescue Young Pigs from Dehydration and Hot Weather Stress

Land O'Lakes Purina Feed, the leader in young animal nutrition, has developed an electrolyte that aims to affect dehydration and electrolyte loss resulting from scours, weaning and hot weather. New UltraCare<sup>®</sup> Swine Electrolyte is formulated with premium ingredients to ensure that growth performance continues despite the rigors of weaning, weather and disease challenge.

### Choose the Superior Nutritional Support of UltraCare<sup>®</sup> Swine Electrolyte

- Formulated with exclusive MpD<sup>®</sup> Technologies for:
  - MpD<sup>®</sup> Class palatants for excellent intake
  - optimal capacity of intestines to absorb more glucose
  - optimal growth and well-being of young pigs
  - supports prevention of weaning-related malabsorption
- Contains vitamin D for a boost in performance
- Effective treatment for pigs to assist with hydration after weaning or sows experiencing hydration loss
- Available in convenient 10-lb bags
- Best results: use in water medicator for 5-7 days after weaning

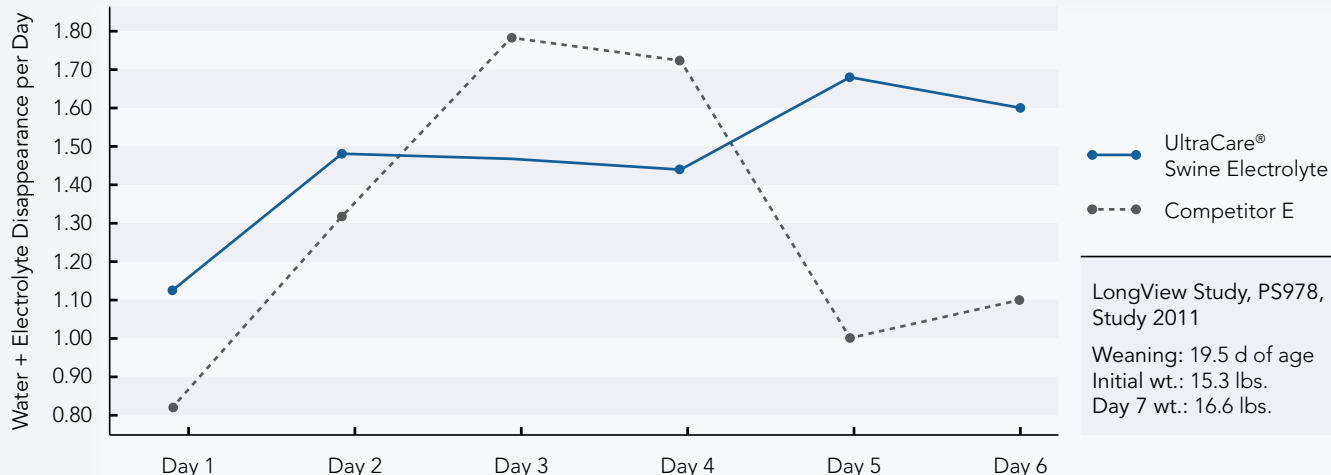

Ask your Land O'Lakes Purina Feed cooperative or dealer for the NEW UltraCare<sup>®</sup> Swine Electrolyte.

## Young Pigs Prefer UltraCare® Swine Electrolyte

Pigs showed an early preference for UltraCare® Swine Electrolyte over a leading competitor after weaning.

### UltraCare Swine Electrolyte Study

### Minimum Guaranteed Analysis Per Pound

	Minimum
Sodium	0.9730%
Potassium	0.8868%
Magnesium	0.3000%
Vitamin D	97,000 IU/lb

### Ingredients

Dextrose, citric acid, maltodextrin, salt, potassium chloride, malic acid, monopotassium phosphate, calcium acetate, magnesium sulfate, ascorbic acid, glycine, sodium bicarbonate, saccharin, Vitamin D supplement and natural and artificial flavors

KEEP OUT OF REACH OF CHILDREN

KEEP BAG TIGHTLY SEALED BY UTILIZING ZIPLOCK

### Directions for Use

UltraCare® Swine Electrolyte can be used in water or feed for five to seven days after weaning, handling or shipping or until the pigs are consuming a normal amount of feed following elevated stress conditions.

### Mixing Directions

Direct Addition to Drinking Water

- Add 1 ounce (3 level Tablespoons) to each 4 gallons of water
- Add 1 lb (2.5 cups) to each 64 gallons of water

### Using Medicators or Proportioners

- Add 2 lbs (5 cups) to enough water to make 1 gallon of stock solution. Mix until dissolved. Use 1 ounce of stock solution per gallon of drinking water.

### Addition to Feed

- Add 15 lbs to each ton of complete feed
